Pure World Energy Signs New Agreement, to distribute Low NO_x Capstone Microturbines in the UK

Pure World Energy (PWE), UK specialists in distributed energy solutions, has extended its distributor agreement with Capstone Turbine Corporation for a five-year period. To support this strategic development, PWE has launched its new website.

PWE's new agreement allows for the business to offer financed solutions for Capstone microturbines in the UK and Ireland, as well as extending the current agreement for distribution of Capstone products in the south of the UK.

PWE CEO, Sean Fitzpatrick, comments: "The UK and Ireland have significant potential for the deployment of Capstone microturbines in Combined Heat and Power (CHP) or power only applications. Energy savings, emissions reduction and reliability are the key benefits for customers adopting our microturbine solutions. The US CHP market indicates that microturbines' share of CHP installations in the 100 kW to 5 MW category has reached a record high of 25% and we see no reason why this cannot be replicated in the UK and Ireland."

"To support an ambitious growth plan the regional customer base needs a distributor that is focused on delivering Capstone solutions. This agreement provides customers with the assurance and security that PWE and Capstone will be working collaboratively for a significant period."

PWE has also announced today the launch of its new website, www.pureworldenergy.com. The site offers quick and easy access to essential product and services information, while offering a more comprehensive understanding of the company's value proposition and overall client benefits.

About Pure World Energy & Capstone Turbine Corporation

Pure World Energy (PWE) is a specialist in distributed power generation. Established in 2013, PWE delivers ESCo-funded on-site energy generation solutions throughout the UK, powered by Capstone microturbines.

Capstone Turbine Corporation is the world's leading developer and manufacturer of clean and green microturbine power generation systems, and was first to market with its high efficiency air bearing turbine technology. Many of the Fortune 500 top global companies use Capstone products.
